

8TH INTERNATIONAL CONGRESS OF BEHAVIOURAL OPTOMETRY

Speaker: Charles Shidlofsky
Credentials: O.D., FCOVD
Time/Date Scheduled: 1300 – 1500 on Thursday, 26 April
Location: Plenary

Presentation Title: **The Use of Neuro-therapeutic Lenses in Traumatic Brain Injury**

Abstract: The goal of this lecture is to discuss and detail the use of therapeutic prism in a neuro-optometric practice. We will review the specific tests we use which lead us to the correct prismatic prescription. In addition, we will cover some electro-diagnostic procedures (both Optometric and non-Optometric) which can also help us determine the correct prescription. Included in this will be VEP, posturography, visual fields, OKN and VOR testing. We will also talk about the importance of observing your patients head and body position as well as gait. Lastly, we will also discuss optical considerations in fitting therapeutic lenses.
